Q.4. Read the following passage and answer the questions. **4**

Historical research, writing and studies are carried out with an objective of understanding the chronology of the past events and the events themselves. This is a continuous process.

In the physical and natural sciences the empirical (laboratory method of experiments and observation) method is used to verify the available knowledge. This method allows establishing laws that remain true irrespective of the time and space. Those laws can be tested and proved repeatedly.

In historical research it may not be possible to use the method of experiments and observation. This is so because we were not present in the historical time and space and the historical events cannot be recreated. Also in history it is not possible to establish laws that remain true irrespective of the time and space.

To begin, we need an expert who knows the language and script of a historical document in order to read it and understand its meaning. Also, the experts can examine the authenticity of the document by using criteria such as lettering style, author's style of writing, manufacturing date and type of paper, stamps of authority, etc. Such document is further scrutinized by historian with the help of relevant historical references.

- (i) What is the objective of carrying out historical research, writing and studies?

- (ii) Why is it not possible to use method of experiments and observation in historical research?
- (iii) Why is an expert in history required for historical research?
- (iv) Which method is used to verify knowledge in physical and natural research?

Q.5. Answer in detail. (Any Two)**8**
